Sage Research Methods Online

Sage Research Methods (SRM) is an online collection of books, journals, videos, datasets, methods and reference materials that provide authoritative information on how to perform hundreds of research methods, particularly in the social sciences.

It provides material to guide users through every step of the research process.

SRM is useful to new researchers that are still navigating research methods or choosing the research method that is most applicable to their research question.

But it can also be used by anyone needing to keep up-to-date on the new uses of specific methods or changing research practices.

Introduction: Images in the Age of their Technical Reproduction

[Page 302] This chapter considers methodological and theoretical contexts for the employment of still photographs and moving film in ethnographic reports. It sketches these uses in light of the historical development of fieldwork, ethnography and participant observation in order to show how they reflect theoretical and epistemological concerns. On to our historical consideration of these methods we chart developments in photographic, film and video representational technologies. From within this framework we ask, what role do pictorial and filmic materials play in the predominantly written inscriptions of ethnographic reports?

Why Do Research?

Research is used to find things out, reaffirm the results of previous work, solve new or existing problems, support existing theories, or develop new theories. A research project may also be an expansion on previous work in the field. In order to test the validity of instruments, procedures, or experiments, research may replicate elements of prior projects, or the project as a whole. The primary purposes of research are documentation, discovery and interpretation, or the research and development of methods and systems for the advancement of knowledge.

Research has one fundamental characteristic: It uses scientific methods to produce evidence and results. It does this by following rules, so that findings do not depend upon the personal views of the researchers.

[Learn About Cross-Tabulation in SPSS With Data From the American National Election Study \(2012\)](#)

Abstract:

This dataset is designed for teaching cross-tabulation. The dataset is a subset of data derived from the 2012 American National Election Study (ANES), and the example presents a cross-tabulation between party identification and views on same-sex marriage. The dataset file is accompanied by a teaching guide, a student guide, and a how-to guide for SPSS. [Read More](#)
